

# Meadows and More: Grassland management, restoration and creation

**Join us for an inspiring event focussing on grassland habitats and how you can manage them with wildlife in mind or create new areas of valuable habitat.**

Whilst wildflower meadows are hard to beat for the variety of wildlife they support, rough tussocky grass or a short lawn full of clover can also be of great benefit. Somerset Wildlife Trust's Land Management Advisor Ellie Higginson will provide practical advice on how to decide what changes to grassland management will bring a lawn to life and which options might work well in your community or on your land.

The session will include a visit to SWT's Edford Meadows Nature Reserve for inspiration and to see some of the beautiful plant and invertebrate species that make grasslands so special.

**Saturday 18<sup>th</sup> June 2022**

**10:00am – 1:00pm**

**Somerset Earth Science Centre, Stoke St Michael, Radstock, BA3 5JU**

**Tickets: £5 per person**

**To book please email [events@somersetwildlife.org](mailto:events@somersetwildlife.org)**

*This training session is delivered by  
Somerset Wildlife Trust and  
Somerset Earth Science Centre, and  
is supported by John Wainwright Ltd*
